Sample 1,743 U.S. Adults
 Conducted July 19 – July 22, 2024
 Margin of Error $\pm 2.8\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,743 U.S. adults interviewed online between July 19 – July 22, 2024.

The sample was weighted according to gender, age, race, education, 2020 election turnout and Presidential vote, baseline party identification, and current voter registration status. Demographic weighting targets come from the 2019 American Community Survey. Baseline party identification is the respondent's most recent answer given prior to November 1, 2022, and is weighted to the estimated distribution at that time (33% Democratic, 27% Republican). Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults. The weights range from 0.1 to 3.9, with a mean of 1 and a standard deviation of 0.7.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 2.8%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
