There is currently a debate about whether regulation should have the goal of delaying super intelligence. Super intelligent AI is AI that vastly exceeds the capabilities of humans. Supporters of regulation to delay super intelligence say that the AI labs are actively pursuing superhuman AI that is more powerful than humans. They claim that such AI is very dangerous with unknown consequences. It could lead to catastrophic risks to humanity. They say super intelligence hasn't been proven safe and we aren't ready. Opponents of regulation to delay super intelligence say that super intelligence is a long time away, if it will ever arrive. They claim it's fearmongering to worry about this. Additionally, they claim that when superintelligence does arrive, it will be beneficial for humanity, for example being able to advance research to cure diseases.

What do you think? Should regulation take the active goal of preventing AI superintelligence?

Yes, regulation should aim to actively prevent AI superintelligence	60	55	59	56	52	55	53	59	49	61	51	52	59	59	54	57	55	57	58	65

Some policymakers have suggested that the creators of AI models should be liable for harms caused by the models they release. Supporters of this policy say tech companies will take too many risks and release unsafe technologies unless they are held responsible for the damages from the technologies they create. They say companies have a strong financial incentive to downplay and conceal the risks. Opponents say that the user causing the harm should be liable, not the creator of the technology. For example, Dell isn't liable for a hacker using their laptop for illegal hacking. Holding the creators of technology liable would slow down innovation and investment and seriously harm the competitiveness of the AI industry. What do you think? Should AI companies be held liable for the harms from the technologies they create?

Yes, AI companies should be liable for harms from technologies they create	79	82	82	84	79	84	83	84	84	79	80	80	82	85	82	81	81	88	85	78
