For the following questions, by "Renewable energy" we mean energy that is generated from sources that are naturally regenerated, such as, wind, solar, hydro (water), and biomass etc.

For "Non-renewable energy" we mean energy that is generated from limited resources that cannot be as quickly replaced such as coal, oil, natural gas and nuclear energy etc. (although nuclear is often considered a low-carbon energy source but it is classified in this survey as a "non-renewable" because it relies on limited sources to produce energy).

To the best of your knowledge, which of the following comes closest to the energy used by the National Grid?

All of the energy used by the National Grid is from renewable energy sources	1	0	1	2	0	2	2	0	1	1	2	2	1	0	1	2	1	1	4	1	0
Most of the energy used by the National Grid is from renewable energy sources, but some comes from non-renewable energy sources	14	10	17	17	11	16	16	14	16	11	12	13	15	14	15	13	14	13	22	18	13
