When AI companies create new AI models, they create the models through a process known as a "training run". Some policy makers are proposing that AI companies be required to register large training runs with the government in advance of conducting them. They say that it's essential the public knows when large, potentially dangerous, models are created. Other policy makers disagree. They say that such registration would hamper research, making it difficult for some AI companies to innovate. They also claim that such a regulatory regime would be expensive and wasteful.What do you think? Should governments require companies to register large training runs for foundation models?

Yes, governments should require companies to register large training	63	65	68	68
runs			•••	
No, governments should not require companies to register large training	10	14	14	13
runs		••	••
