METHODOLOGY

YouGov interviewed 1,407 U.S. adults before the first presidential debate, and again after the debate on September 10-11, 2024, for The Times, and the SAY24 project for Stanford, Arizona State, and Yale Universities.

The pre-debate sample was weighted according to gender, age, race, and education based on the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote and 2022 baseline partisan identification. The post-debate sample was weighted to account for differential non-response using gender, age, race, education, geographic region, pre-debate partisan identification, and pre-debate presidential vote intention.

The margin of error for a percentage based upon the entire sample is ± 5.1 points. The margin of error accounts for the design effect of the survey, which is 1.9 for the full sample. The margin of error is larger for subsamples and differences of percentages.
