# HOW THE POLL WAS CONDUCTED AND THE MARGIN OF ERROR CALCULATED

This CBS News/YouGov survey was conducted with a representative sample of 2,826 registered voters nationwide interviewed between June 28-July 2, 2024.

The sample was weighted by gender, age, race, and education, based on the U.S. Census American Community Survey and Current Population Survey, as well as past vote. Respondents were selected to be representative of adults nationwide. Battlegrounds are AZ GA MI NC NV PA WI. The weights range from 0.1 to 8.1, with a mean of 1 and a standard deviation of 0.7.

The *margin of error* (a 95% confidence interval) for a sample percentage  $p$  based upon the entire sample is approximately  $\pm 2.3$  points. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and  $n$  is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
