28. Health Insurance Subsidies

Subsidies that help make health care coverage more affordable for roughly 20 million Americans who purchase insurance through an Obamacare (ACA) marketplace are set to expire at the end of the year, increasing premiums by 114% on average. Which comes closest to your view?

30. Favor 50-Year Mortgages

The 30-year fixed-rate mortgage is the most common type of home loan in the United States. A 50-year mortgage would lower monthly payments by spreading them out over two additional decades, but it would also roughly double the amount of interest borrowers pay over the course of the loan. Would you favor or oppose allowing banks to offer an option for a 50-year mortgage?

Sample	1,684 U.S. Adults
Conducted	November 21 - November 24, 2025
Margin of Error	$\pm 3.0\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,684 U.S. adults interviewed online between November 21 - November 24, 2025.

The sample was weighted according to gender, age, race, education, 2024 election turnout and Presidential vote, party identification, and current voter registration status. Demographic weighting targets come from the 2019 American Community Survey. Party identification is weighted to the estimated distribution at the time of the election (31% Democratic, 33% Republican). Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults. The weights range from 0.1 to 6.5, with a mean of 1 and a standard deviation of 0.8.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 3.0%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
