32. Approve of Trump Being Dictator if Crime Lowered

Speaking last week to reporters, Donald Trump said "The line is that I'm a dictator, but I stop crime. So a lot of people say, 'You know, if that's the case, I'd rather have a dictator.'" Would you approve or disapprove of the U.S. having a dictator if it led to a much lower level of crime?

45. Approve of Texas Republicans Redistricting
U.S. House redistricting efforts typically take place every 10 years, after each new Census reveals changes in population distribution. But earlier this month, Donald Trump successfully pushed Republican legislators in Texas to pass new congressional district boundaries five years earlier than normal to help Republicans win five additional U.S. House seats in the 2026 midterm elections. Do you approve or disapprove of Texas Republicans passing these new congressional district boundaries?

Yahoo! News Poll

Sample	1,690 U.S. Adults
Conducted	August 29 - September 2, 2025
Margin of Error	$\pm 3.1\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,690 U.S. adults interviewed online between August 29 - September 2, 2025.

The sample was weighted according to gender, age, race, education, 2024 election turnout and Presidential vote, party identification, and current voter registration status. Demographic weighting targets come from the 2019 American Community Survey. Party identification is weighted to the estimated distribution at the time of the election (31% Democratic, 33% Republican). Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults. The weights range from 0.1 to 6.5, with a mean of 1 and a standard deviation of 0.8.

The *margin of error* (a 95% confidence interval) for a sample percentage *p* based upon the entire sample is approximately 3.1%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + \text{CV}^2}{n}}$$

where CV is the coefficient of variation of the sample weights and *n* is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
