22. Favorability of Nationalizing Elections

The U.S. Constitution puts individual states in charge of elections, not the federal government. Last week, Donald Trump said he wanted "Republicans [to] take over the voting" in 15 states in order to "nationalize" the 2026 midterm elections. Would you favor or oppose the Republican Party taking over the voting in November?

86. Agreement with RFK Jr. Recommendations on Milk

Health Secretary Robert F. Kennedy Jr. is urging schools to resume serving full-fat and 2% milk to children and has placed whole milk near the top of the newly revised food pyramid. Do you agree or disagree with these decisions?

Sample 1,704 U.S. Adults
Conducted February 9 - February 12, 2026
Margin of Error $\pm 3.0\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,704 U.S. adults interviewed online between February 9 - February 12, 2026.

The sample was weighted according to gender, age, race, education, 2024 election turnout and Presidential vote, party identification, and current voter registration status. Demographic weighting targets come from the 2019 American Community Survey. Party identification is weighted to the estimated distribution at the time of the election (31% Democratic, 33% Republican). Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults. The weights range from 0.1 to 6.5, with a mean of 1 and a standard deviation of 0.8.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 3.0%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
