1. Website filters - ISPs

Some people have called for Internet Service Providers to offer a service that filters internet sites and automatically blocks pornographic sites from people's home internet service. Some people think that customers should have to choose to have their internet service filtered (an opt-in service), other people think that internet services should all be filtered unless customers ask for their service to be unfiltered (an opt-out service). Do you think internet filters should be opt-in or opt-out?
